

# **Why ASP.Net MVC Development Company** **Should opt for .Net Core?**

The ASP.Net framework is known for being one of the best and most functional platforms for web development needs. You should ideally plan on investing in software application development only when you have a clearly defined requirement, well-devised strategy and a planning framework. Once you are well aware of all of this, your next plan is to hire the perfect ASP.Net MVC development company that will offer you the best tools and technology support to get through the development process with ease.

In the present times, a lot of companies are opting for .Net core, and there is a reason why. Here we will talk about all the benefits you will gain by associating yourself with .Net core for application development.

- The best part of .Net core is the fact that it is cross platform. Let us go back to the time when you start planning for an application development. The first thing you need to think through is the operating system. In a market that seems to be constantly evolving, you need to choose a system that best fits your needs. so, whether it is adding servers or making instant changes, the operating system should meet all your demands. Switching from Windows to Linux is pretty efficient and easy with .Net core. In fact, you don't need any major skillsets to do that. Hire an ASP.Net development company, and they will take care of the switching.
- The new .Net core framework can be up and running across any platform unlike the earlier versions which required you to operate on Windows alone. Hosting on Linux has become easier with the .Net core as it supports all the different operating systems. In fact, you can even develop an application for the MacOS. You can even create your own server with this framework.
- It is open source, so the users can easily modify the framework to make it suitable to the needs. as an ASP.Net MVC development company you can practice agile development as a result of the open source platform. With open source, developing an application leads to the long life of the application as there is no particular vendor that you need to opt for. As .Net core is an open source framework, you won't be paying for the framework, which means you can invest in the other things such as the hosting, training etc. of the application and framework.
- The .Net framework has been here for a long time, which makes it quite a mature and able framework. You have already seen it being an able framework that enables development of apps in the different niches. It is a stable platform, which allows you to reuse the code, and also allows you to keep evolving your application to suit the current needs. As it uses C#, the ASP.Net development company can easily handle the various issues, and make the framework productive and efficient to suit the needs.

You will see that the framework supports a wide range of applications that allow you to gain traction and make your business efficient.
