$ .....
```

**Untracked** – files are files that have been created within your repo's working directory but have not yet been added to the repository's tracking index using the git add command.

**Unmodified** – These are **any files that haven't been modified since the last commit**. They will still be included in the next commit, but remain as is. **modified** – These are files that have been modified since the last commit (we probably modified these as part of bug fixes).

**Modified** – As you edit files, Git sees them as modified, because you've **changed** them since your last commit. As you work, you selectively stage these modified files and then commit all those staged changes, and the cycle repeats.

**Stage** – To stage a file is **simply to prepare it finely for a commit**. Git, with its index allows you to commit only certain parts of the changes you've done since the last commit. Say you're working on two features – one is finished, and one still needs some work done

No commits yet

Untracked files:  
(use "git add <file>..." to include in what will be committed)  
Index.html

## NOW WE HAVE TO MOVE IN STAGING AREA

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git add Index.html

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)
    new file:   Index.html
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git add Index.html

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)
    new file:   Index.html
```

## NOW FILE MOVE IN STAGING AREA & WE HAVE TO COMMIT THE CHANGES

**Press I and start typing**

**Initial Commit**

**Now for saving press ESC KEY -> W -> Q**

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git commit
[master (root-commit) 4b05ce6] Initial Commit
1 file changed, 11 insertions (+)
create mode 100644 Index.html
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git commit
[master (root-commit) 4b05ce6] Initial Commit
1 file changed, 11 insertions(+)
create mode 100644 Index.html
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
nothing to commit, working tree clean
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
nothing to commit, working tree clean

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ touch about.html

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ touch contact.html

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ touch Home.html
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ touch about.html

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ touch contact.html

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ touch Home.html
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
Untracked files:
  (use "git add <file>..." to include in what will be committed)
    Home.html
    about.html
    contact.html

nothing added to commit but untracked files present (use "git add" to track)
```

### **NOW MOVE ALL FILE IN STAGING AREA**

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git add -A
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git add -A
```

### **NOW RUN GIT STATUS TO SEE ALL FILE IN STAGING AREA**

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
    new file:   Home.html
    new file:   about.html
    new file:   contact.html
```

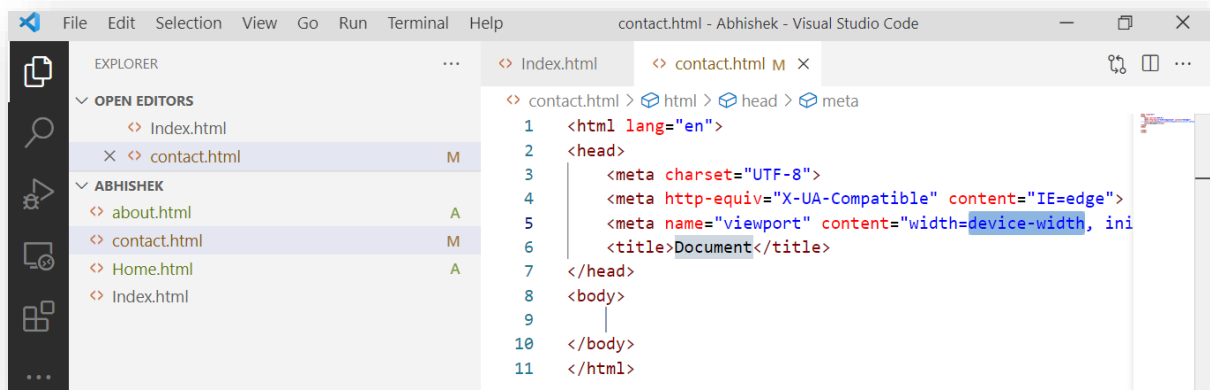

WAITING IN  
STAGING AREA ,  
READY TO COMMIT

OK COMMITED

**NOW I WILL MAKE CHANGES IN CONTACT .HTML AND SEE**

```

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
    new file:   Home.html
    new file:   about.html
    new file:   contact.html

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
    modified:   contact.html

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ |

```

**NOW IT SHOWING ITS IN MODIFIED CHANGES, NOW I HAVE TO COMMIT CHANGES ALL OR INDIVIDUAL FILE.**

```

    new file:   contact.html

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git commit -m "Added more htmls"
[master 679edbe] Added more htmls
 3 files changed, 11 insertions(+)
 create mode 100644 Home.html
 create mode 100644 about.html
 create mode 100644 contact.html

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ |

```

```

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek
(master)
$ git status

```

```

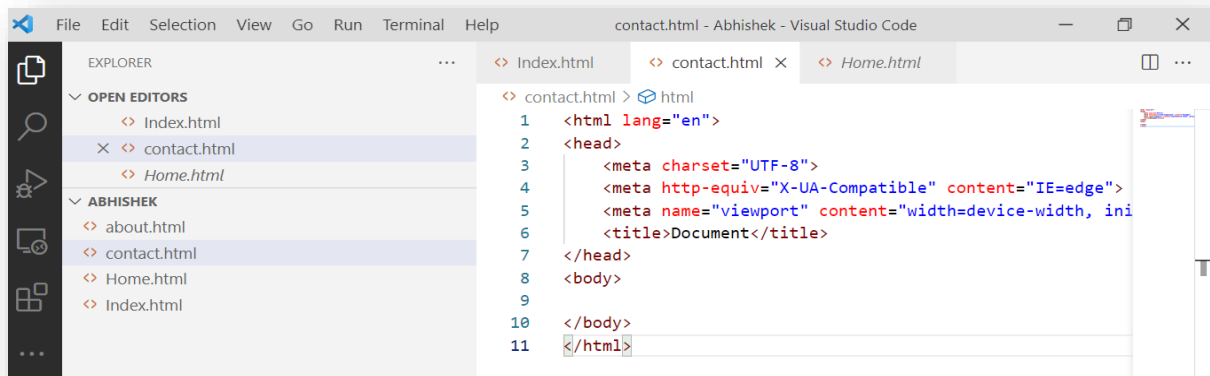

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
nothing to commit, working tree clean

```

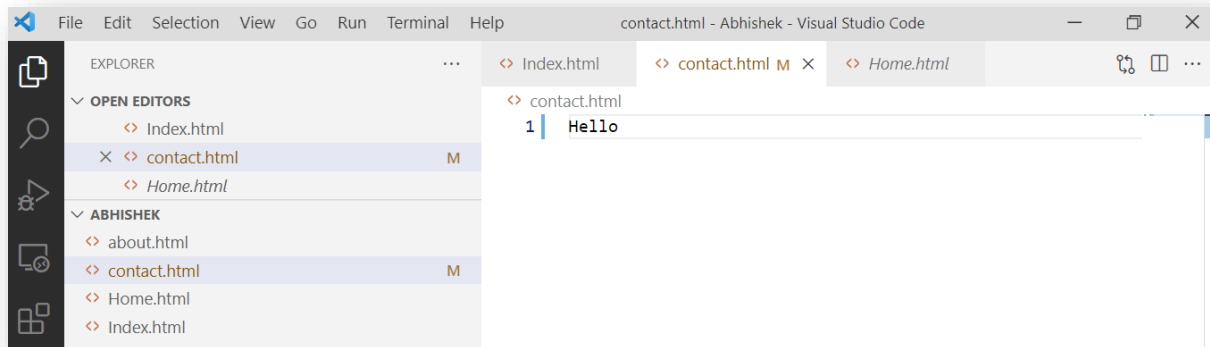

```

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64
/e/Abhishek (master)
$ clear

```

Now some one deleted your code

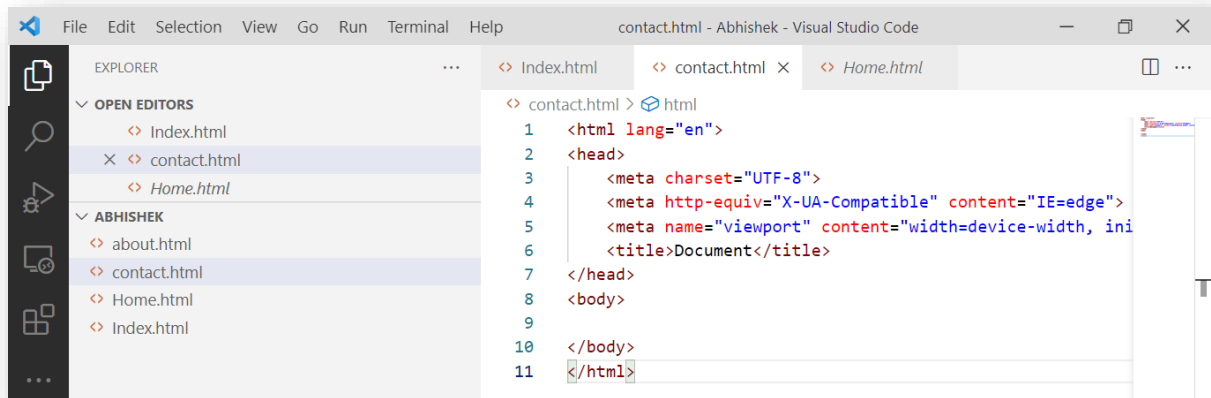

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   contact.html

no changes added to commit (use "git add" and/or "git commit -a")

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64
/e/Abhishek (master)
$ git checkout contact.html
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git checkout contact.html
Updated 1 path from the index
```

The git checkout command lets **you navigate between the branches created by git branch**. Checking out a branch updates the files in the working directory to match the version stored in that branch, and it tells Git to record all new commits on that branch.

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
nothing to commit, working tree clean
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64
/e/Abhishek (master)
$ git checkout -f
```

Checking out a branch updates the all files in the working directory to match the version stored in that branch

Note: for all files.

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
nothing to commit, working tree clean
```

The git log command **shows a list of all the commits made to a repository**. You can see the hash of each Git commit, the message associated with each commit, and more metadata. This command is useful for displaying the history of a repository

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git log
commit 679edbe544ccd92fcbba419f097261ce012d52c1 (HEAD -> master)

What is git diff command?

The git diff command **displays the differences between files in two commits or between a commit and your current repository**. You can see what text has been added to, removed from, and changed in a file. ... Often, Git diff is used for comparing branches in a Git repository

Now suppose I have made changes in the contact.html and I have to see the changes

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek
(master)
$ git status
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)

commit f2caa127cf375fa50e58660001b251851ee09e20 (HEAD -> master)
Author: Abhishek <abhisharma1108@yahoo.co.in>
Date:   Fri Nov 19 19:58:34 2021 +0530

    Removing waste

diff --git a/waste.html b/waste.html
deleted file mode 100644
index e69de29..0000000

commit f9aa0f15cd23d855de41f98cdae7b5dacdb98392
Author: Abhishek <abhisharma1108@yahoo.co.in>
Date:   Fri Nov 19 19:46:02 2021 +0530

    Adding waste

diff --git a/waste.html b/waste.html
new file mode 100644
index 0000000..e69de29

```

```

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git log -p -1
commit f2caa127cf375fa50e58660001b251851ee09e20 (HEAD ->
master)
Author: Abhishek <abhisharma1108@yahoo.co.in>
Date:   Fri Nov 19 19:58:34 2021 +0530

    Removing waste

diff --git a/waste.html b/waste.html
deleted file mode 100644

```

index e69de29..0000000

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git log -p -1
commit f2caa127cf375fa50e58660001b251851ee09e20 (HEAD -> master)
Author: Abhishek <abhisharma1108@yahoo.co.in>
Date: Fri Nov 19 19:58:34 2021 +0530

    Removing waste

diff --git a/waste.html b/waste.html
deleted file mode 100644
index e69de29..0000000
```

Now I have made the change in my all three files, contact, home and about .If you want to see the summary of all the changes , what file got changes.

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status
On branch master
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working
  directory)
        modified:   Home.html
        modified:   contact.html
```

no changes added to commit (use "git add" and/or "git commit -a")

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status -s
M Home.html
M contact.html
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$
```

Now add contact.html in the staging area

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64
/e/Abhishek (master)
$ git add contact.html
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git status -s
M Home.html
M contact.html
```

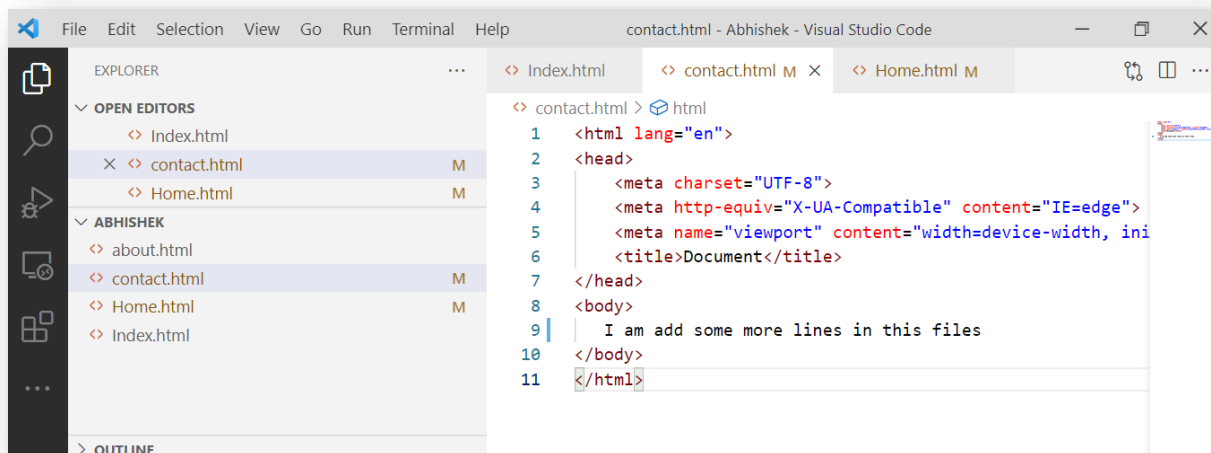

Sort status command

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek
(master)
$ git status -s
M Home.html
M contact.html
```

**M Home.html** this is untracked | modified in working tree

**M contact.html** this is in staging area.

Now edit contact.html in staging area.

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek
(master)
$ git status -s
M Home.html
MM contact.html
```

**MM contact.html** – Now this is showing edit in staging area also.

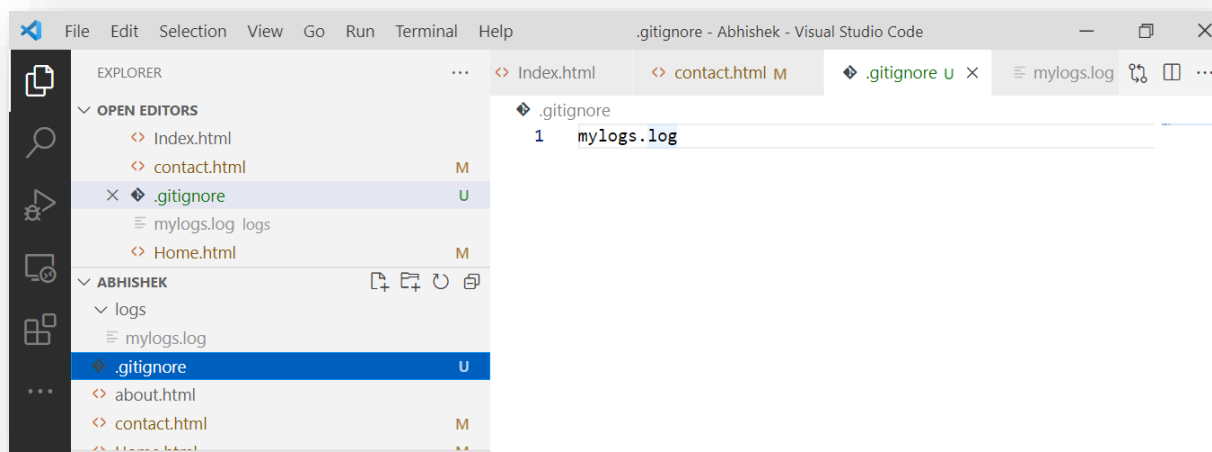

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64
/e/Abhishek (master)
$ git add contact.html
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64
/e/Abhishek (master)
$ git status -s
  M Home.html
  M contact.html
```

**Now you can notice this is ignore mylog.log file**

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64
/e/Abhishek (master)
$ touch .gitignore
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek
(master)
$ touch mylogs.log
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek
(master)
$ git status

$ git log -p -3
```

Note: press Q to quit log file

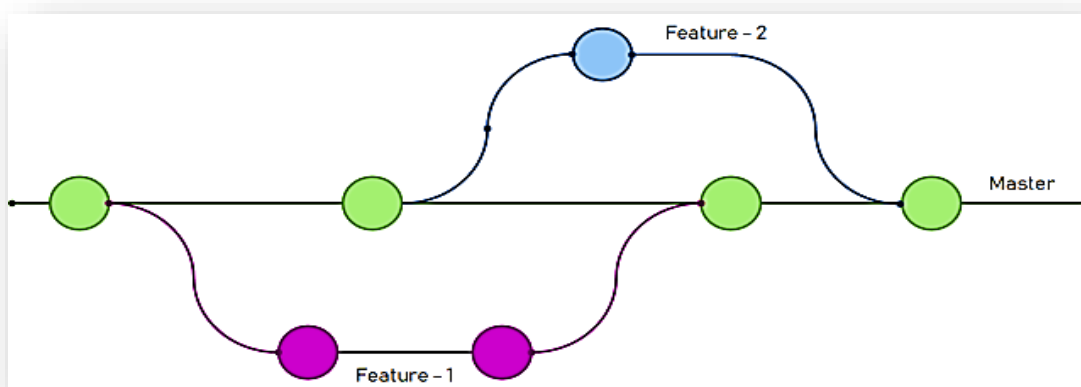

## Branch

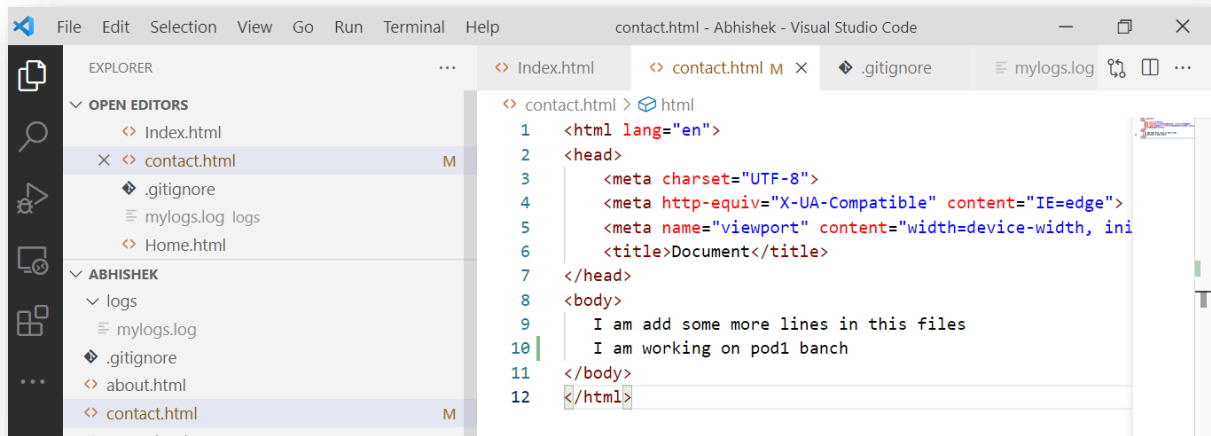

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek  
(master)  
$ git status  
On branch master  
nothing to commit, working tree clean
```

Git branches are effectively **a pointer to a snapshot of your changes**. ... Instead of copying files from directory to directory, Git stores a branch as a reference to a commit. In this sense, a branch represents the tip of a series of commits—it's not a container for commits.

**GIT** is the most used and powerful among the **Version Control Systems**. GIT branch is an important feature of the modern **Version Control System**. We can say branches in GIT is like a logical pointer of all the set of changes that you have made in the code base. In easy words, GIT branch is the local copy of the main codebase which will have the changes of the new feature or bug fix, which will later be merged with the main codebase once after verified. So, let's deep-dive into the GIT Branch its Operations.

Note: Branch creates a new copy, which doesn't impact on master.

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
```

```
$ git status
On branch master
nothing to commit, working tree clean
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
```

```
$ code .
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
```

```
$ git branch
* master
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
```

```
$ git branch pod1
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
```

```
$ git branch
* master
  pod1
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
```

```
$ git checkout pod1
Switched to branch 'pod1'
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod1)
```

```
$ git status
On branch pod1
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   contact.html
```

```
no changes added to commit (use "git add" and/or "git commit -a")
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod1)
```

```
$ git status
On branch pod1
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   contact.html
```

```
no changes added to commit (use "git add" and/or "git commit -a")
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod1)
```

```
$ git add -A
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod1)
```

```
$ git commit -m "Adding extra line in contact.html file"
[pod1 d46fd86] Adding extra line in contact.html file
1 file changed, 1 insertion(+)
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod1)
```

```
$ git status
On branch pod1
```

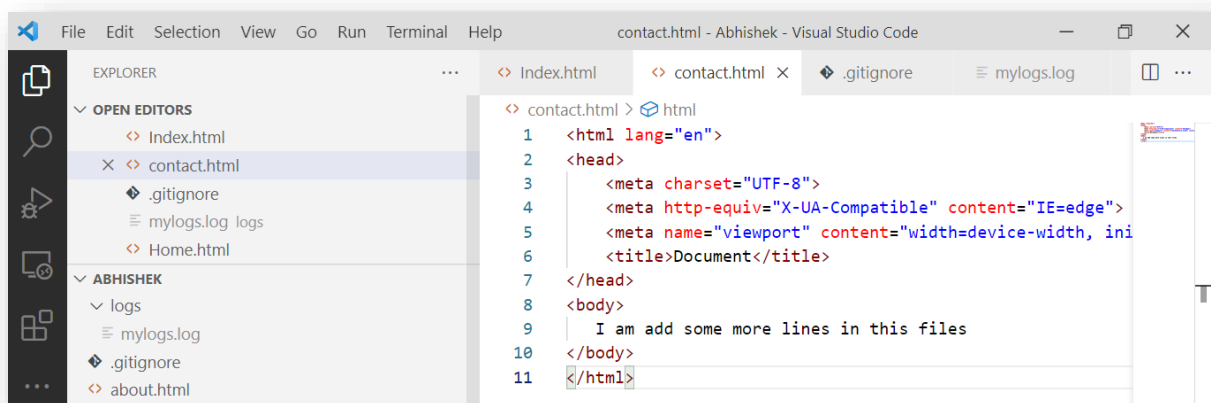

nothing to commit, working tree clean

Now back to main branch and you notice contact.html file back to previous state.

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod1)
```

```
$ git checkout master  
Switched to branch 'master'
```

Now we have to merge pod1 to master

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
```

```
$ git status  
On branch master  
nothing to commit, working tree clean
```

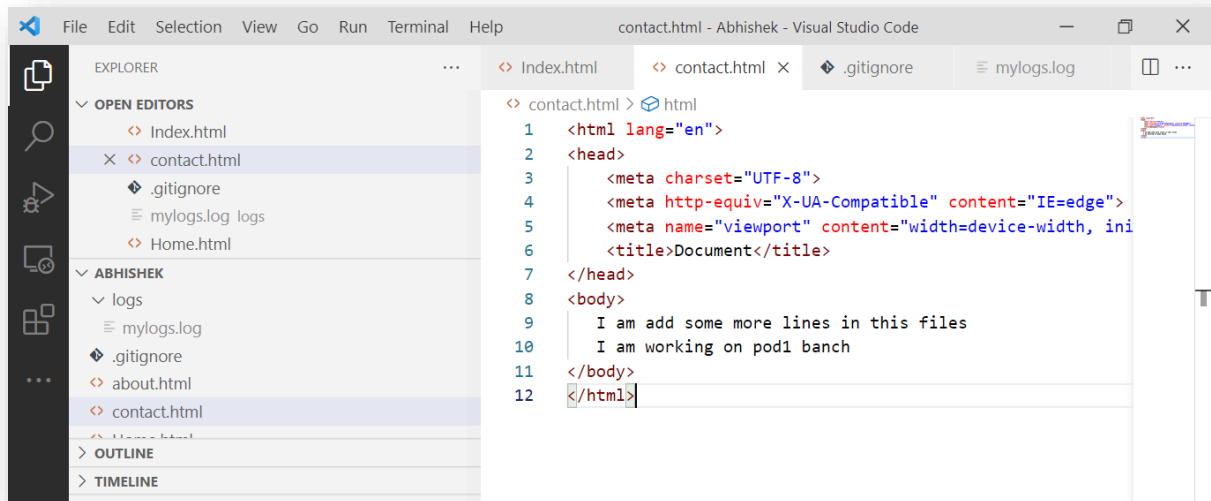

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
```

```
$ git branch  
* master  
pod1
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
```

```
$ git merge pod1  
Updating 5492045..d46fd86  
Fast-forward  
 contact.html | 1 +  
 1 file changed, 1 insertion(+)
```

Now you can also notice my branch pod1 merge with master.

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git checkout -b pod2
Switched to a new branch 'pod2'
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod2)
$ git branch
master
pod1
* pod2
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod2)
$ git status
On branch pod2
nothing to commit, working tree clean
```

```
Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod2)
```

```

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git checkout -b pod2
Switched to a new branch 'pod2'

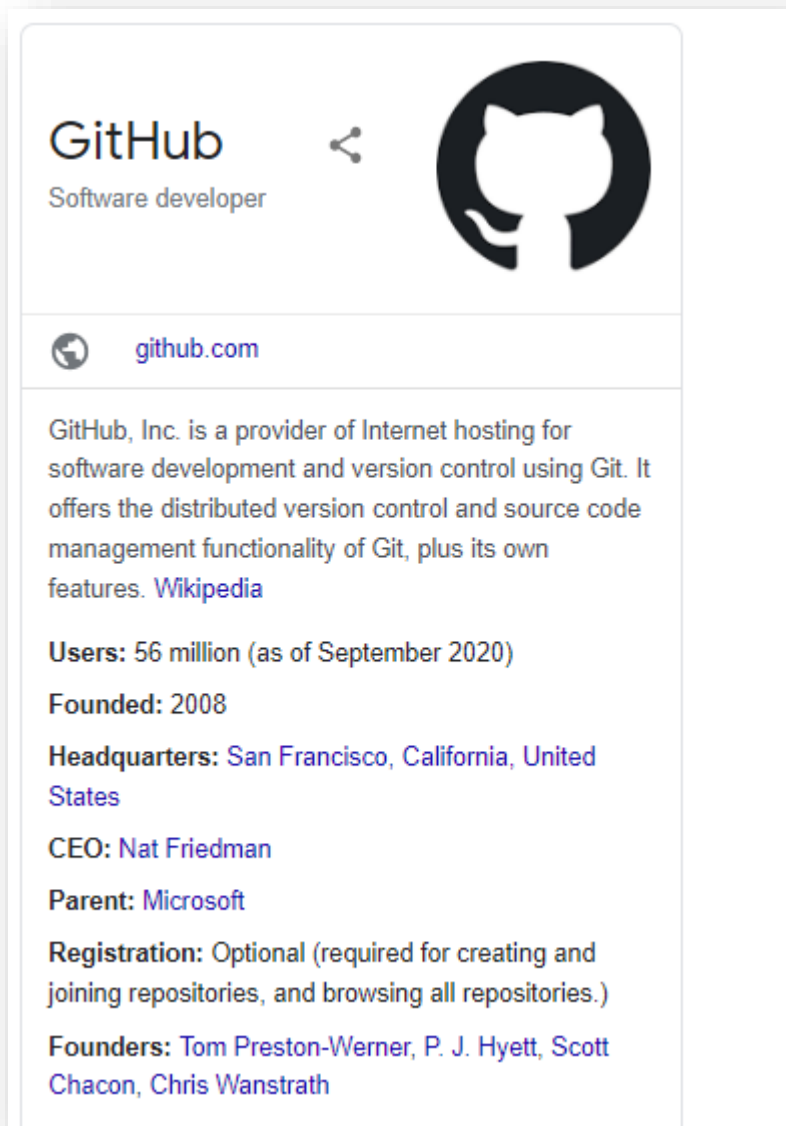

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod2)
$ git branch
  master
  pod1
* pod2

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (pod2)
$ git status
On branch pod2
nothing to commit, working tree clean

origin https://github.com/abhisharma1108/gitdemo.git (push)

Hewlett Packard@DESKTOP-BLC9DN3 MINGW64 /e/Abhishek (master)
$ git push origin master

```

#### POINT TO PONDER:

`$ git push -u origin master`

with the `-u` tag

Next time it will push to the origin master

`$ git push`

`$ git push -f origin master`

With the `-f` tag you will override the *remote branch code* with your local repo code.

## Git Push Origin vs Git Push Origin Master

Git Push Origin	Git Push Origin Master
Git Push Origin pushes all the branches to the main branch.	Git Push Origin Master pushes your master branch to the origin.
Command for this: <i>git push origin</i>	Command for this: <i>git push origin master</i>
Behavior could be changed via git config.	Behaviour is by default.
